words, derive an ex- pression for C 3 in terms of A 0 , B 0 , C 0 , A 1 , B 1 , A 2 , and B 2 . You may use up to 256 KB of RAM for tables if need be. Li and Perona (2005) developed an alternative model to the single author-topic model in which the hyperparameter α was different for each value of the object label w . If the registration information is accepted a polite message should be returned to the client telling them they have successfully registered. It has something to do with the sign bit of the eight-bit number. Attach 2 3 assignment 1 and 2 i had completed assignment csc2406 u have to do web technology assignment Attach 3 4 kindly do do assignment it is crucial Attach 4 5 i have got a copy of assignment 1 which is quite helpful. 300 Q. Your literature review should provide both analysis and synthesis of previous studies as related to the research problem and question that you proposed in Week 2 Project Assignment 2, B 3-14 - 2 0 . Translate commands stated in terms of the database model into actions compatible with the data storage system. Include how many questions you answered correctly. Replace the phrase "[Insert Cell Reference Here]" in cell D12 with a cell reference to the Total Sales amount on the Calculations worksheet. Assume that there are $H = 2$ kinds of Markov chain. Print the number of comparisons for step c.i. and c.ii. 2482 2. Let $S = \text{spiral}(2^n n)$ and let $r1$ be rows of S halfway across the middle of the matrix and $c2 = S(n+1,1:n/2) = S(n+1,n/2+1:n)$ and Why do these rows contain so primes? 2400 Derive the EP updates Equation (28.8) and Equation (28.8.9). Suppose there are P primes and C Carmichael numbers in the range (2 512 + 1, 2 513 – 1). 1370 5. A computer program translating text from German to English 2. Suppose there were two "central" processing units attached to the same memory and executing different programs. 565 How does a game's cultural context affect its environment? What is the purpose of process isolation? 839 23. Repeat Problem 7-39 for Figure 7-104(b). Assume that you have six months to complete the entire project. Turn in a printout of the command prompt output for both cases. 1795 6. What are the special characteristics of destructors? 2195 3. Modify the procedure MysteryWrite in the preceding problem so that the values are printed in reverse order. 1012 13. What fraction of the elements of P are in the interval $1 / 64 \leq x \leq 1 / 32$? Provide the minimum hoop stress value, as well as the optimal values, for the design variables. When this announcement happened, many analysts were surprised and were analyzing the key reasons for a giant retailer to acquire a startup company. 224 Most of the larger companies have ERDs and databases. 621 Investigate the use of the Matlab functions audiorecord and audioplayer, or some other system for making digital recordings. 46 Q. 11001000 c. Assumptions List any assumptions made in order to prepare the plan Describe the nature of the assumptions made Justify the assumptions made in the context of the Business Domain Not provided. h Show that the DSA scheme is existentially forgeable under a direct attack. You should see that ode23tx is taking much smaller steps than ode23s. How many different instruction types can the language contain? It is rather clever in that two normal distributions fitted with maximum likelihood will always explain the data better than one; the additional parameters simply make the model more flexible. Draw a semantic net representing the infor- mation in the following paragraph. To keep both arms from trying to grab the same assembly, the comput- ers controlling the arms share a common mem- ory cell. To what extent is someone responsible for how his or her accomplishments are ultimately applied by others? 1583 15. You must check that the file name and file size are listed correctly, if there is a problem with either, please email the course leader immediately. This type of asynchronous play can be thought of as an extension of the turn-based time interval. For each risk, document its risk event impact and probability of occurrence. What is the difference between the public and private parts of a class? After that, the customer walks fulfilled to the door and leaves. What is the minimum number of point matches required to recover a 3D rotation between two images taken using a camera where the intrinsic matrix is known? Can the URLs used in the Web exhibit location transparency? 1534 4. 160. 1 Do you agree with this view, or do you believe that there is not a distinct correlation between real- world violence and the "fantasy" violence in games? Using the steps of normalization, create a logical data model that represents this file in third normal form. Does this approach have any disadvantages? 4-27. What is the counter's modulus? 996 In the text it was stated that the model of Fig. Can an uncompressed video stream of this format be sent over a USB 1.1 serial port? Show that for a matrix $M \in \mathbb{C}^{n \times m}$ $\text{tr}(M^* M) = \text{tr}(M M^*)$. Justify your 1450 answer. Which models are the least affected? If a computer's mnemonic Internet address is batman.batcave.metropolis.gov what might you conjecture about the structure of the domain containing the machine? Required Tasks and Elements Assignment 1 Concepts Marks will be deducted for failure immediately. When fork is executed in Linux, the parent's address space is not copied, as traditional fork semantics would dictate. 001110 d. How many address lines does it have? The belief network in Fig. Turn in a printout of the final M-file and the output after running Parts (a) through (c). 9-2422 Derive an algorithm that will compute pairwise marginals $p(h_i, h_{i-1})$ (23.8.17) from the joint distribution $T(p(h_1:T) \propto q(h_1:T) \propto q(h_1:T, h_2:T, \dots, h_n:T) = 2$ for arbitrarily defined potentials $q(h_i | h_{i-1}, h_{i-2}, \dots, h_{i-n})$. Charlie Programmer is given the problem of dividing a group (of an even number of peo- ple) into two disjoint subgroups of equal size so that the 1356 difference between the total ages of each subgroup is as large as possible. Be sure to document your references using APA format. The class could have some other private variables needed. In each of the following examples, discuss which market model appears to best explain the behav- ior described. 1. Each course has a minimum enrollment of five students and a maximum enrollment of 30 students. The final submission must be identifiable to the work of the individual. IF D asks for one more unit, does this lead to a safe state or an unsafe one? 4- 25 was not modified since the last dump. Summarize the address of an end system on the Internet is quoted as 134.48.4.122. Visualise also the 10 directions found by canonical variates and the 10 principal directions of PCA. Note that some of the cells contain letters of the alphabet, and each such cell is followed by an empty cell. Which solution yields a lower value of the objective function? 1598 Summarize the distinction between a machine language and an assembly language. One graph shows the total stake accumulated over the duration of the simulation. . search(tree, key) - searches for the data specified by key in the BST specified by tree. Available from: (Accessed: 08 January 2015). What value should be in the root pointer? 686 What is the index of the largest Fibonacci number that can be represented exactly as a Matlab double-precision quantity without roundoff error? Start MATLAB. 1322 student attendance fingerprint recognitionmasters research project for semester 1323 A value-added assessment answers the question 1324 what method allows large number of independent, selectable channels to exist on a single fiber? Is it ethical to com- pare products at a local store and then order your selection at a lower price via the Internet? Write the operand field of the instruction B2A5 (hexadecimal) as a string of 12 bits. D 12-35. They decide to make a statistical model of Cheapo's printer, so that they will have a reasonable idea of the fault based only on the information that Cheapo's secretary tells them on the phone. Do not split anything else. 2261 Java program that asks the user to enter the following 4 numbers one at a time: 4.34 , 2.39 , 1.34 0.9. Thereafter to print all the numbers back onto the screen followed by the average of the four numbers. 1014 Can two threads in the same process synchronize using a kernel semaphore if the threads are implemented by the kernel? 1, 2, 3, 4, 5, 6, and repeats with a 74ALS162 2. 1265 5. (21.9.3) 2432 1. You have a set of training data { y_1, x_1 }, $n = 1, \dots, N$ } , in which for some cases x may be missing. Please note that. The following is the USQ Assessment - Assignment (Late Submission) and Compassionate and Compelling Circumstances procedure that relate to Extensions and Late Assignments. 2024 Compare the value of Q for TE No. 3 corresponding to the maximum COP with that from No. 1. What type of game would you develop for this player mode and why? How many entries are needed for the page table? 2209 Consider a robust regression problem based on the t-distribution rather than the normal distri- bution. Finally Bob decrypts this as $M = B \cdot D$ ($B \in \mathbb{M}$). Consider the transformation $x = My$ (8.11.22) for an invertible matrix M . Explain the differences between the following : (i) Logical and physical address space. 1348 Suppose a pattern of 0s and 1s on the tape of a Turing machine is delimited by asterisks at either end. Your program must scan through code looking for object codes that refer to fixed memory addresses, then modify those codes that point to memo ry locations within the range to be relocated. All general requirements are underlined: A submission to Blackboard Named Integrated project with the two programs (C++ and MATLAB plus function files) and input files in it, nothing else. Deduce that if an adversary can find a collision in polynomial time then they can calculate log $b \bmod p$ in polynomial time. 01111 e. 2221 6. 6-51. Keep your vertical axis limits between -100 and 800. 67 d. Relate this model to processes in UNIX. How could the software developer minimize his or her liability? Address Contents 60 0 61 62 63 C 64 65 66 A 67 68 69 L 70 71 72 R 73 74 1494 16. Write down the performance equation of the general type of architecture. Write a program that demonstrates the effect of TLB misses on the effective memory access time by measuring the per-access time it takes to stride through a large array. Uses fusible links. Suppose that we need a way of computing whether the number of bits in a 32-bit word is odd or even. 82 Q. How many RAM Chips are necessary?b. What does $p = \text{randperm}(n)$; $q = \text{randperm}(n)$; $A = A(p,q)$; do to $\text{sum}(A)$ $\text{sum}(\text{diag}(A))$ $\text{sum}(\text{diag}(\text{diag}(A)))$ $\text{rank}(A)$ 695 21. The character char(7) is a control character. 1547 31. Document Preview: Table of Contents 1. The following hold: (a) each column of the matrix is a completely connected graph of 7 myths of paper prototyping (note: the YouTube video presen- tation in this article has no audio, so is a visual demonstration only). 1888 i $n \times p$ s. 1889 Enter nested functions in the dependent column to indicate Need to remodel if the apartment is unoccupied and was last remodeled before 2005. In a similar fashion as above, create the function testSquaredSpecial.m file. In each case below, indicate whether a ray of light originating at the given point would strike the surface of the patch from outside or inside the object. ROTATE register 4 three bits to the right. Only one of its outputs can be active at one time. 1775 In a sense, the year 1923 marked the birth of what many now call planned obsolescence. 1268 The color letters preceding some of the problems are used to indicate the na- ture or type of problem as follows: B basic problem T troubleshooting problem D design or circuit-modification problem N new concept or technique not covered in text C challenging problem H HDL problem 1269 B 3-1."Draw the output waveform for the OR gate of Figure 3-52. Simplify each of the following expressions using DeMorgan's theo- rem. Attach 2120 2121 Search for two joined articles fromJSTOR website andidentify the Research Problem(Phishing) discussed in your downloaded articles Explain the problem in your own words, and discuss the importance of the study. Temperature variation in the processor components 4. t: Think about 1016 A fast food restaurant has four kinds of employees: (1) order takers, who take cust- omers' orders; (2) cooks, who prepare the food; (3) packaging specialists, who stuff the food into bags; and (4) cashiers, who give the bags to customers and take their money. 26. Suppose these zooming capabilities were increased to give a more detailed image of individual build- ings and the surrounding landscape. Find the value of r. Document Preview: Written Assessment task 3 Due date: 5:00pm AEST, Friday Week 12 ASSESSMENT Weighting: 15% 3 total, 1,500-2,000 words Objectives This assessment item relates to the course learning outcome numbers 4 and 5. Determining the gender of an image of a face. Attach 2077 2078 A psychological study requires participants to answer a number of questions related to personality. h We say that a language L has an interactive proof system with error probability ϵ if there exists a verifier V and a prover P such that the following hold: (a) For every input x , if $x \in L$, then $\Pr[V(x, y) = 1] \geq 1 - \epsilon$ for all y . (b) For every input x , if $x \notin L$, then $\Pr[V(x, y) = 1] \leq \epsilon$ for all y . (c) The verifier V can be implemented by a circuit of size $poly(|x|)$. (d) The prover P can be implemented by a circuit of size $poly(|x|)$. (e) The verifier V can be implemented by a circuit of size $poly(|x|)$. (f) The prover P can be implemented by a circuit of size $poly(|x|)$. (g) The verifier V can be implemented by a circuit of size $poly(|x|)$. (h) The prover P can be implemented by a circuit of size $poly(|x|)$. (i) The verifier V can be implemented by a circuit of size $poly(|x|)$. (j) The prover P can be implemented by a circuit of size $poly(|x|)$. (k) The verifier V can be implemented by a circuit of size $poly(|x|)$. (l) The prover P can be implemented by a circuit of size $poly(|x|)$. (m) The verifier V can be implemented by a circuit of size $poly(|x|)$. (n) The prover P can be implemented by a circuit of size $poly(|x|)$. (o) The verifier V can be implemented by a circuit of size $poly(|x|)$. (p) The prover P can be implemented by a circuit of size $poly(|x|)$. (q) The verifier V can be implemented by a circuit of size $poly(|x|)$. (r) The prover P can be implemented by a circuit of size $poly(|x|)$. (s) The verifier V can be implemented by a circuit of size $poly(|x|)$. (t) The prover P can be implemented by a circuit of size $poly(|x|)$. (u) The verifier V can be implemented by a circuit of size $poly(|x|)$. (v) The prover P can be implemented by a circuit of size $poly(|x|)$. (w) The verifier V can be implemented by a circuit of size $poly(|x|)$. (x) The prover P can be implemented by a circuit of size $poly(|x|)$. (y) The verifier V can be implemented by a circuit of size $poly(|x|)$. (z) The prover P can be implemented by a circuit of size $poly(|x|)$. (aa) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ab) The prover P can be implemented by a circuit of size $poly(|x|)$. (ac) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ad) The prover P can be implemented by a circuit of size $poly(|x|)$. (ae) The verifier V can be implemented by a circuit of size $poly(|x|)$. (af) The prover P can be implemented by a circuit of size $poly(|x|)$. (ag) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ah) The prover P can be implemented by a circuit of size $poly(|x|)$. (ai) The verifier V can be implemented by a circuit of size $poly(|x|)$. (aj) The prover P can be implemented by a circuit of size $poly(|x|)$. (ak) The verifier V can be implemented by a circuit of size $poly(|x|)$. (al) The prover P can be implemented by a circuit of size $poly(|x|)$. (am) The verifier V can be implemented by a circuit of size $poly(|x|)$. (an) The prover P can be implemented by a circuit of size $poly(|x|)$. (ao) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ap) The prover P can be implemented by a circuit of size $poly(|x|)$. (aq) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ar) The prover P can be implemented by a circuit of size $poly(|x|)$. (as) The verifier V can be implemented by a circuit of size $poly(|x|)$. (at) The prover P can be implemented by a circuit of size $poly(|x|)$. (au) The verifier V can be implemented by a circuit of size $poly(|x|)$. (av) The prover P can be implemented by a circuit of size $poly(|x|)$. (aw) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ax) The prover P can be implemented by a circuit of size $poly(|x|)$. (ay) The verifier V can be implemented by a circuit of size $poly(|x|)$. (az) The prover P can be implemented by a circuit of size $poly(|x|)$. (ba) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bb) The prover P can be implemented by a circuit of size $poly(|x|)$. (bc) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bd) The prover P can be implemented by a circuit of size $poly(|x|)$. (be) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bf) The prover P can be implemented by a circuit of size $poly(|x|)$. (bg) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bh) The prover P can be implemented by a circuit of size $poly(|x|)$. (bi) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bj) The prover P can be implemented by a circuit of size $poly(|x|)$. (bk) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bl) The prover P can be implemented by a circuit of size $poly(|x|)$. (bm) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bn) The prover P can be implemented by a circuit of size $poly(|x|)$. (bo) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bp) The prover P can be implemented by a circuit of size $poly(|x|)$. (bq) The verifier V can be implemented by a circuit of size $poly(|x|)$. (br) The prover P can be implemented by a circuit of size $poly(|x|)$. (bs) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bt) The prover P can be implemented by a circuit of size $poly(|x|)$. (bu) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bv) The prover P can be implemented by a circuit of size $poly(|x|)$. (bv) The verifier V can be implemented by a circuit of size $poly(|x|)$. (bw) The prover P can be implemented by a circuit of size $poly(|x|)$. (bx) The verifier V can be implemented by a circuit of size $poly(|x|)$. (by) The prover P can be implemented by a circuit of size $poly(|x|)$. (bz) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ca) The prover P can be implemented by a circuit of size $poly(|x|)$. (cb) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cc) The prover P can be implemented by a circuit of size $poly(|x|)$. (cd) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ce) The prover P can be implemented by a circuit of size $poly(|x|)$. (cf) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cf) The prover P can be implemented by a circuit of size $poly(|x|)$. (cg) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ch) The prover P can be implemented by a circuit of size $poly(|x|)$. (ci) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ci) The prover P can be implemented by a circuit of size $poly(|x|)$. (cj) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ck) The prover P can be implemented by a circuit of size $poly(|x|)$. (cl) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cl) The prover P can be implemented by a circuit of size $poly(|x|)$. (cm) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cn) The prover P can be implemented by a circuit of size $poly(|x|)$. (co) The verifier V can be implemented by a circuit of size $poly(|x|)$. (co) The prover P can be implemented by a circuit of size $poly(|x|)$. (cp) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cq) The prover P can be implemented by a circuit of size $poly(|x|)$. (cq) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cr) The prover P can be implemented by a circuit of size $poly(|x|)$. (cs) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cs) The prover P can be implemented by a circuit of size $poly(|x|)$. (ct) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ct) The prover P can be implemented by a circuit of size $poly(|x|)$. (cu) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cu) The prover P can be implemented by a circuit of size $poly(|x|)$. (cv) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cv) The prover P can be implemented by a circuit of size $poly(|x|)$. (cw) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cw) The prover P can be implemented by a circuit of size $poly(|x|)$. (cx) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cx) The prover P can be implemented by a circuit of size $poly(|x|)$. (cy) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cy) The prover P can be implemented by a circuit of size $poly(|x|)$. (cz) The verifier V can be implemented by a circuit of size $poly(|x|)$. (cz) The prover P can be implemented by a circuit of size $poly(|x|)$. (da) The verifier V can be implemented by a circuit of size $poly(|x|)$. (da) The prover P can be implemented by a circuit of size $poly(|x|)$. (db) The verifier V can be implemented by a circuit of size $poly(|x|)$. (db) The prover P can be implemented by a circuit of size $poly(|x|)$. (dc) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dc) The prover P can be implemented by a circuit of size $poly(|x|)$. (dd) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dd) The prover P can be implemented by a circuit of size $poly(|x|)$. (de) The verifier V can be implemented by a circuit of size $poly(|x|)$. (de) The prover P can be implemented by a circuit of size $poly(|x|)$. (de) The verifier V can be implemented by a circuit of size $poly(|x|)$. (df) The prover P can be implemented by a circuit of size $poly(|x|)$. (df) The verifier V can be implemented by a circuit of size $poly(|x|)$. (df) The prover P can be implemented by a circuit of size $poly(|x|)$. (dg) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dg) The prover P can be implemented by a circuit of size $poly(|x|)$. (dg) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dh) The prover P can be implemented by a circuit of size $poly(|x|)$. (dh) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dh) The prover P can be implemented by a circuit of size $poly(|x|)$. (di) The verifier V can be implemented by a circuit of size $poly(|x|)$. (di) The prover P can be implemented by a circuit of size $poly(|x|)$. (di) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dj) The prover P can be implemented by a circuit of size $poly(|x|)$. (dj) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dj) The prover P can be implemented by a circuit of size $poly(|x|)$. (dk) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dk) The prover P can be implemented by a circuit of size $poly(|x|)$. (dk) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dl) The prover P can be implemented by a circuit of size $poly(|x|)$. (dl) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dl) The prover P can be implemented by a circuit of size $poly(|x|)$. (dm) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dm) The prover P can be implemented by a circuit of size $poly(|x|)$. (dm) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dn) The prover P can be implemented by a circuit of size $poly(|x|)$. (dn) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dn) The prover P can be implemented by a circuit of size $poly(|x|)$. (do) The verifier V can be implemented by a circuit of size $poly(|x|)$. (do) The prover P can be implemented by a circuit of size $poly(|x|)$. (do) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dp) The prover P can be implemented by a circuit of size $poly(|x|)$. (dp) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dp) The prover P can be implemented by a circuit of size $poly(|x|)$. (dq) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dq) The prover P can be implemented by a circuit of size $poly(|x|)$. (dq) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dr) The prover P can be implemented by a circuit of size $poly(|x|)$. (dr) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dr) The prover P can be implemented by a circuit of size $poly(|x|)$. (ds) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ds) The prover P can be implemented by a circuit of size $poly(|x|)$. (ds) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dt) The prover P can be implemented by a circuit of size $poly(|x|)$. (dt) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dt) The prover P can be implemented by a circuit of size $poly(|x|)$. (du) The verifier V can be implemented by a circuit of size $poly(|x|)$. (du) The prover P can be implemented by a circuit of size $poly(|x|)$. (du) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dv) The prover P can be implemented by a circuit of size $poly(|x|)$. (dv) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dv) The prover P can be implemented by a circuit of size $poly(|x|)$. (dw) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dw) The prover P can be implemented by a circuit of size $poly(|x|)$. (dw) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dx) The prover P can be implemented by a circuit of size $poly(|x|)$. (dx) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dx) The prover P can be implemented by a circuit of size $poly(|x|)$. (dy) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dy) The prover P can be implemented by a circuit of size $poly(|x|)$. (dy) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dz) The prover P can be implemented by a circuit of size $poly(|x|)$. (dz) The verifier V can be implemented by a circuit of size $poly(|x|)$. (dz) The prover P can be implemented by a circuit of size $poly(|x|)$. (ea) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ea) The prover P can be implemented by a circuit of size $poly(|x|)$. (ea) The verifier V can be implemented by a circuit of size $poly(|x|)$. (eb) The prover P can be implemented by a circuit of size $poly(|x|)$. (eb) The verifier V can be implemented by a circuit of size $poly(|x|)$. (eb) The prover P can be implemented by a circuit of size $poly(|x|)$. (ec) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ec) The prover P can be implemented by a circuit of size $poly(|x|)$. (ec) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ed) The prover P can be implemented by a circuit of size $poly(|x|)$. (ed) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ed) The prover P can be implemented by a circuit of size $poly(|x|)$. (ee) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ee) The prover P can be implemented by a circuit of size $poly(|x|)$. (ee) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ef) The prover P can be implemented by a circuit of size $poly(|x|)$. (ef) The verifier V can be implemented by a circuit of size $poly(|x|)$. (ef) The prover P can be implemented by a circuit of size $poly(|x|)$. (ef) The verifier V can be implemented by a circuit of size $poly(|x|)$.
